

V. KESIMPULAN DAN SARAN

5.1. KESIMPULAN

Kesimpulan dari penelitian ini antara lain:

1. Indeks nilai penting berkisar 1,12 % - 32,52 % dengan *Diospyros hermaphroditica* (Zoll.) Bakh. sebagai anakan pohon yang memiliki indeks nilai penting tertinggi.
2. Kelimpahan individu setiap jenis anakan pohon hampir sama (indeks pemerataan 0,93).
3. Indeks morista (IM) sebesar 2,03 menunjukkan bahwa pola sebaran anakan pohon hidup mengelompok.
4. Kemampuan restorasi/pemulihan melalui regenerasi alami beberapa species adalah *vigorous*.

5.2. SARAN

Untuk menentukan kelangsungan hidup (*survivorship*) species-species anakan pohon yang cocok dan layak sebagai species restorasi, perlu dilakukan penelitian eksperimen dengan berbagai perlakuan dan pemantauan.
