PENGESAHAN ........................................................................................................ ii
RINGKASAN ...................................................................................................... iii
PRAKATA .................................................................................................................. iv
DAFTAR ISI ................................................................................................................ v
DAFTAR TABEL ...................................................................................................... vi
DAFTAR GAMBAR ............................................................................................... vii

BAB I. PENDAHULUAN ..................................................................................... 1
  1.1. Latar Belakang .............................................................................................. 1
  1.2. Perumusan masalah ..................................................................................... 3

BAB II. TINJAUAN PUSTAKA ......................................................................... 4
  2.1. Kebutuhan Protein dalam diet berbagai jenis catfish .................................... 4
  2.2. Bahan-bahan alternatif pengganti tepung ikan dalam diet ikan budidaya ........................................ 4
  2.3. Potensi ikan rucah hasil tangkapan (by-catch), pengawetan dan pemanfaatannya dalam diet ikan budidaya ........................................ 5

BAB III. TUJUAN DAN MANFAAT PENELITIAN ........................................ 8
  3.1. Tujuan Penelitian ............................................................................................ 8
  3.2. Manfaat Penelitian ...................................................................................... 8

BAB IV. METODE PENELITIAN ..................................................................... 9
  4.1. Penelitian secara keseluruhan ........................................................................ 9
  4.2. Uji Pertumbuhan Ikan Sampai ukuran panen (Experimen-3)....................... 11
  4.3. Analisis pertumbuhan, konversi pakan, dan utilisasi nutrien ....................... 12
  4.4. Analisis kualitas daging ikan ........................................................................ 12
  4.5. Desain penelitian dan analisis data.............................................................. 15

BAB V. HASIL DAN LUARAN YANG DICAPAI ......................................... 14
  5.1. Hasil ................................................................................................................. 14
  5.2. Luaran .......................................................................................................... 21

BAB VI. KESIMPULAN DAN SARAN .......................................................... 22
  6.1. Kesimpulan .................................................................................................... 22
  6.2. Saran ............................................................................................................. 22
